

## PLATE SYSTEM PLUS-86-07

**with the correct plate = the marking is always centered**

These 5 marking plates are available for the following diameters:

- 1,0–1,5mm unconditional with cable holder
- 1,6–2,3mm standard incl. cable holder
- 2,4–3,7mm
- 3,8–9,9mm
- 10–28mm

A spring loaded thrust pad can fix the plate looser or stronger. The minimum diameter is engraved at the front side of the plate.

If you don't need to changeover the plates very often you can use the enclosed pointed setscrew to fix.

The cable holder bothsides of the plate hold and stretch the cable/wire in the groove.

The pressure of the cable holder can be regulated at the back of the plate by putting it up or down.

The smaller the diameter the more important the precise positioning.
